

How to get captured video onto your iPad, iPod, iPhone.

For my own curiosity I just experimented with getting a video from the Mac to play on my iPad. I'm running the latest version of iPad OS & iTunes. This works great for me:

1. Capture into Videoglide with File Format set to H.264 @ 25 fps. Save clip to desktop and called it test.avi
2. Set iTunes to manually manage music/video (might not be required).
3. In iTunes -> File -> Add to library -> choose test.avi from Desktop
4. In iTunes go to Library -> Movies -> click on video to convert then select Advanced -> Create Version for iPad (or iPod)
5. Drag new version to iPad. It will appear in the movies folder in iTunes.
6. Go to Videos button on iPad, select video, click play button.
